#### **PCR** information

#### **Product Category Rules (PCR)**

CEN standard EN 15804:2012 + A2:2019/AC:2021 serves as the Core Product Category Rules (PCR)

Product category rules (PCR): PCR 2019:14 Construction Products, version 2.0

Complementary PCR: (c-PCR-005), 2019-12-20. Thermal insulation products (EN 16783:2017)

PCR review was conducted by: The Technical Committee of the International EPD® System. See

www.environdec.com for a list of members.

Chairs of the PCR review: Rob Rouwette (chair), Noa Meron (co-chair).

#### Verification

External and independent (Third-party) verification of the declaration and data, according to ISO
14025:2006, via EPD verification through:
☑ Individual EPD verification without a pre-verified LCA/EPD tool
☐ Individual EPD verification with a pre-verified LCA/EPD tool
☐ EPD process certification* without a pre-verified LCA/EPD tool
☐ EPD process certification* with a pre-verified LCA/EPD tool
☐ Fully pre-verified EPD tool
Independent third-party verification of the declaration and data, according to ISO 14025:2006: ⊠ EPD verification by individual verifier
Third party verifier: Dr. Andrew Norton, a.norton@renuables.co.uk
Approved by: The International EPD© System
Procedure for follow-up of data during EPD validity involves third part verifier:

# Ownership and limitation on use of EPD

The EPD owner has the sole ownership, liability, and responsibility for the EPD.

EPDs within the same product category but published in different EPD programmes may not be comparable. For two EPDs to be comparable, they shall be based on the same PCR (including the same first-digit version number) or be based on fully aligned PCRs or versions of PCRs; cover products with identical functions, technical performances and use (e.g. identical declared/functional units); have identical scope in terms of included life-cycle stages (unless the excluded life-cycle stage is demonstrated to be insignificant); apply identical impact assessment methods (including the same version of characterization factors); and be valid at the time of comparison.

## Information about EPD owner

Address and contact information of the EPD owner: SAINT-GOBAIN ISOVER G+H AG, Willstätterstraße 60, 40549 Düsseldorf

**Description of the organization of the EPD owner:** SAINT-GOBAIN ISOVER G+H AG, Industriestraße 11, 19386 Lübz

Management system-related certification: EN ISO 9001:2015; EN ISO 14001:2015

LCA Practitioner: Heike Zehnter, SAINT-GOBAIN LCA-Team Germany, heike.zehnter@saint-gobain.com

**Communication**: The intended use of this EPD is for B2B communication.

**UN CPC CODE:** 37990 Non-metallic mineral products n.e.c. (Including mineral wool, expanded mineral materials, worked mica, articles of mica, non-electrical articles of graphite or other carbon and articles of peat) **Manufacturing site**(s): SAINT-GOBAIN ISOVER G+H AG, Industriestraße 11, 19386 Lübz

# **Product description**

ISOVER U Protect Wired Mat 4.0 Alu1, 75 mm also 70 mm, 80 mm, 90 mm, 100 mm, 120 mm are a stone wool-based high-performance mineral wool with a melting point > 1000 °C and RAL quality mark of the Gütegemeinschaft Mineralwolle e. V.. Approved in accordance with the Hazardous Substances Ordinance, Chemicals Prohibition Ordinance and Regulation (EC) No. 1272/2008 Note Q. Manufactured using a patented production process without melting beads and with high resilience. ULTIMATE offers equivalent or even better performance in fire, thermal and sound insulation applications than conventional stone wool, even with a significantly reduced density, and can easily replace it in all applications.

ISOVER U Protect Wired Mat 4.0 Alu1 is quilted on the upper side (visible side) with a galvanized wire yarn on galvanized wire mesh and black aluminium laminated.

To calculate the impact of the range of commercial thicknesses between 70 mm and 120 mm, see the table "Conversion to specific thickness" in the additional information section.

# **Hazardous substances**

During the life cycle of the product, one or more hazardous substances listed in the "Candidate List of Substances of Very High Concern (SVHC) for authorization" have been used in a percentage higher than 0.1% of the weight of the product.

# **LCA Information**

TYPE OF EPD	Cradle to gate with options, module C1-C4, module D and optional modules (A4-A5 + B1-B7).
DECLARED UNIT	1 m <sup>2</sup> of product with a thermal resistance of 1,60 K.m <sup>2</sup> .W <sup>-1</sup> (temperature 10°C), a thickness of 75 mm, and a density of 66 kg/m <sup>2</sup> .
SYSTEM BOUNDARIES	Cradle to gate with options, module C1-C4, module D and optional modules (A4-A5 + B1-B7).
REFERENCE SERVICE LIFE (RSL)	The Reference Service Life (RSL) of the insulation product is 50 years, provided that the product is installed correctly into the building. This 50-year value is the amount of time that we recommend our products last without refurbishment and corresponds to standard building design life.
CUT-OFF RULES	In the case that there is not enough information, the process energy and materials representing less than 1% of the whole energy and mass used can be excluded (if they do not cause significant impacts). The addition of all the inputs and outputs excluded cannot be bigger than 5% of the whole mass and energy used, as well as the emissions to the environment occurred.  Flows related to human activities, such as employee transport, are excluded.  The construction of plants, production of machines and transportation systems are excluded since the related flows are supposed to be negligible compared to the production of the building product when compared at these systems lifetime level.
ALLOCATIONS	Allocation has been avoided when possible, and when not possible, a mass allocation has been applied.  The polluter pays and the modularity principles as well have been followed.
DATA QUALITY ASSESSMENT	Data quality of primary and secondary data had been judged by its precision (measured, calculated, or estimated), completeness (e.g., unreported emissions), consistency (degree of uniformity of the methodology applied), and representativeness (geographical, technological, and temporal).
GEOGRAPHICAL COVERAGE AND TIME PERIOD	Scope: Europe Data is collected from one production site, SAINT-GOBAIN ISOVER G+H AG, Industriestraße 11, 19386 Lübz, located in Germany Data collected for the year 2024
BACKGROUND DATA SOURCE SOFTWARE	Databases Sphera CUP2024.2 and ecoinvent v.3.10 GWP100, EN 15804. Version: EF 3.1, February, 2023 Sphera LCA for experts (GaBi) 10

# **Data quality declaration**

# Life cycle stages

## A1-A3. Product stage

The product stage of the mineral wool products is subdivided into 3 modules A1, A2 and A3 respectively "raw material supply", "transport" and "manufacturing".

## A1. Raw materials supply

This module includes the extraction and transformation of raw materials.

#### A2. Transport to the manufacturer

This module includes the transportation of raw materials and packaging to the manufacturing site. The modelling includes road, boat, and/or train transportation.

#### A3. Manufacturing

This module includes the manufacture of products (such as fusion, fiberizing, etc.) and the manufacture of packaging. The production of packaging material is considered at this stage. The processing of any waste arising from this stage is also included.

#### Manufacturing process flow diagram

#### **ULTIMATE** MANUFACTURING BY ISOVER BATCH 1 MELTING ULTIMATE is made primarily The mixture is melted in a gas furnace from mineral raw materials at over 1.400°C. as well as recycled cullets from production FIBERIZING The liquid glass passes through centrifugal spinners. It comes out in the form of fibres onto which binder is sprayed, forming a mattress. PACKAGING 6 The mattress is rolled and compressed in a roll-up machine FORMING The mattress passes through a curing oven to polymerize the binder, which confers mechanical properties and compressibility on the final product. Palletization CUTTING This operation increases The mattress is trimmed to the compression while facilitating specified dimensions, and any storage. excess material is recycled.

Mineral wool is made from high-temperature molten glass that is blown away using centrifugal force to form fine cotton-like fibers. Then, a binder is sprayed on the material to form it, and the product is heated in an oven. Hereafter, the product is cut to size and packed.

## A4-A5. Construction process stage

The construction process is divided into 2 modules: A4, Transport to the building site, and A5, Installation in the building.

#### A4. Transport to the building site

This module includes transport from the production gate to the building site. Transport is calculated based on a scenario with the parameters described in the following table.

PARAMETER	VALUE / DESCRIPTION
Fuel type and consumption of vehicle or vehicle type used for transport, e.g., long-distance truck, boat, etc.	Freight truck, maximum load weight of 27 t, real load 24 t, and consumption of 0.38 liters per km
Distance	100 km by truck
Capacity utilization (including empty returns)	100% of the capacity in volume 68% of the capacity in weight 30% of empty returns
Bulk density of transported products	66 kg/m <sup>3</sup>
Volume capacity utilization factor	1 (by default)

To adjust the effects of transport for further distances, you will find the corresponding multiplication factors in the table 'Influence of transportation to other countries' by additional information.

#### A5. Installation in the building

This module includes: the installation of the product, the surplus of raw materials and packaging (cradle to gate) to compensate for the loss of product during the installation, the transport and management of packaging and product waste.

#### Assumption:

- A loss of 2% of the product is considered during the installation
- The wooden pallet is reused 1-2 times before end-of-life
- The transport of product waste is modelled as in C2-C4.
- No additional accessory, water, or energy was considered for the installation of the insulation product.

PARAMETER	VALUE / DESCRIPTION
Waste of materials on the building site before waste processing, generated by the product's installation (specified by type)	Product: 0,07 kg/DU Pallet: 0,14 kg/DU PE film: 0,05 kg/DU
Transport of packaging waste	Recycling: 50 km
Output materials (specified by type) as results of waste processing at the building site, e.g., of collection for recycling, for energy recovery, disposal (specified by route)	Product losses: 0,06 kg/DU to recycling (100%) Pallet: 0,14 kg/DU to recycling (100%) PE film: 0,05 kg/DU to recycling (100%)
Direct emissions to ambient air, soil, and water	None

# **B1-B7. Use stage (excluding potential savings)**

The use stage is divided into the following modules:

- **B1**: Use
- **B2**: Maintenance
- **B3**: Repair
- **B4**: Replacement
- **B5**: Refurbishment
- B6: Operational energy use
- **B7**: Operational water use

The product has a reference service life of 50 years. This assumes that the product will last in situ with no requirements for maintenance, repair, replacement, or refurbishment throughout this period. Therefore, it has no impact at this stage.

# C1-C4. End of Life Stage

This stage includes the following modules:

- C1: Deconstruction, demolition. The deconstruction and/or dismantling of the product takes part of the demolition of the entire building. In our case, the energy considered for demolition is 0.045 MJ/kg.
- C2: Transport to waste processing
- C3: Waste processing for recycling
- C4: Waste disposal, including physical pre-treatment and site management.

## Description of the scenarios and additional technical information for the end of life:

PARAMETER	VALUE/DESCRIPTION
Energy for demolition	0,045 MJ/kg diesel
Collection process specified by type	The entire product, including any facing, is collected with mixed construction waste.
Recovery system specified by type	The product is recycled when it has reached its end-of-life phase.
Disposal specified by type	3,69 kg of product are recycled
Assumptions for scenario development (e.g., transportation)	The waste going to recycling is transported 50 km by truck from deconstruction/demolition sites to recycling plant.

# D. Reuse/recovery/recycling potential

In module D, it's declared the environmental benefits and loads from reusable products, recyclable materials, or energy recovery. Module D considers:

- Inputs of secondary raw materials: recycled raw materials for product and packaging (pre- and post-consumer)
- Outputs of secondary materials: product and/or packaging sent to recycling,
- Exported energy (electric or thermal): product and/or packaging sent to incineration with energy recovery.

# **Environmental performance**

As specified in EN 15804:2012+A2:2019/AC:2021 and the Product-Category Rules, the environmental impacts are declared and reported using the baseline characterization factors based on EF 3.1. Raw materials and energy consumption, as well as transport distances have been taken directly from the manufacturing plant.

The estimated impact results are only relative statements which do not indicate the end points of the impact categories, exceeding threshold values, safety margins or risks.

The results of the end-of-life stage (modules C1-C4) should be considered when using the results of the product stage (modules A1-A3).

**Disclaimer 1:** The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high or as there is limited experienced with the following indicators:

- Resource use, mineral and metals [kg Sb eq.]
- Resource use, energy carriers [MJ]
- Water deprivation potential [m³ world equiv.]
- Land use [Pt]
- Human toxicity (cancer) [CTUh]
- Human toxicity(noncancer) [CTUh]
- Ecotoxicity (freshwater [CTUe]

**Disclaimer 2:** The impact category lonizing radiation, human health [kBq U235 eq.] deals mainly with the eventual impact of low dose ionizing radiation on human health of the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents, occupational exposure nor due to radioactive waste disposal in underground facilities. Potential ionizing radiation from the soil, from radon and from some construction material is also not measured by this indicator.

**Disclaimer 3:** The assumptions for the modules are in accordance with the project report (LCA study).

The following non-mandatory additional environmental indicators are not declared:

- Ecotoxicity freshwater [CTUe]
- Particulate Matter emissions [Disease incidence]
- Cancer human health effects [CTUh]
- Ionizing radiation human health [kBq U235 eq.]
- Non-cancer human health effects [CTUh]
- Land Use [Pt].

Results refer to a functional/declared unit of 1 m<sup>2</sup> of mineral wool with thermal resistance of 1,60 K.m<sup>2</sup>.W<sup>-1</sup> (temperature 10°C) for a thickness of 75 mm.

To obtain the sustainability results for all other thicknesses, please refer to the sections 'Declaration of variation' and 'Additional environmental information', where you will find a table with the conversion factors.

# Information on biogenic carbon content

		PRODUCT STAGE
Bioge	nic Carbon Content	A1 / A2 / A3
<b>(P)</b>	Biogenic carbon content in product [kg]	0,00E+00
P	Biogenic carbon content in packaging [kg]	5,78E-02

Note: 1 kg biogenic carbon is equivalent to 44/12 kg CO2.

Regarding packaging, biogenic carbon is quantified due to wooden pallets production.

<sup>&</sup>lt;sup>3</sup> This indicator accounts for all greenhouse gases except biogenic carbon dioxide uptake and emissions and biogenic carbon stored in the product. As such, the indicator is identical to GWP-total except that the CF for biogenic CO2 is set to zero.

## **Declaration of variation**

## Variation between products

According to PCR 2.0, since this EPD is multi-product, the variation of impact between products shall be declared.

The following table provides this variation of impact between

- reference and minimum (if the minimum is not the reference product).
- reference and the maximum (if the maximum is not the reference product).
- the minimum and the maximum.

<b>DEVIATION</b> (A1-A3)	BETWEEN 75 mm REFERENCE AND 70 mm		BETWEEN 70 mm MINIMUM AND 120 mm MAXIMUM
GWP-GHG	-4,5%	+39,7%	+46,3%

## Additional environmental information:

## **Conversion to specific thicknesses**

This EPD® includes the range of products with different thicknesses between 70 mm and 120 mm. A multiplication factor can be applied to obtain the environmental performance of every thickness. All the results of this EPD® refer to the reference thickness of 75 mm with a value thermal conductivity of 0,031 W/(m·K) (temperature 10°C).

Technical data and physical characteristics for other material thicknesses on page 2 and 3.

To obtain the environmental performance associated with every specific thickness, the results expressed in this EPD<sup>®</sup> must be multiplied by its corresponding multiplication factor. The calculation of the conversion factor is based on the GWP-GHG indicator for A1-A3.

# **Electricity information**

The SAINT-GOBAIN ISOVER G+H AG factory based in Lübz uses electricity with Guarantee of Origin certificate (GO).

Hence, the electricity mix considered for the manufacturing of the studied product is modelled according to the electricity mix described in the Guarantee of Origin certificate. The amount of electricity purchased with GO covers 100% of the electricity consumption on the manufacturing site.

TYPE OF INFORMATION	DESCRIPTION
Location	Representative of the Guarantee of Origin purchased by Saint-Gobain
Share of electricity covered by the Guarantee of Origin	100% of the energy consumption is covered by the GO
	Share of energy sources
Energy sources for electricity	Hydro 100%
	2% transmission losses
Dataset version	Sphera CUP2024.2
Source	Guarantee of Origin certificate: Ökostrom Zertifikat Pfalzwerke
GWP-GHG CO <sub>2</sub> eq.	0,0172 kg of CO <sub>2</sub> eq./kWh

An EPD is valid for 5 years. Therefore, the GO will be prolonged continuously to be valid for the whole validity of the EPD. If not prolonged, the EPD will be updated.

# Influence of transportation to other countries

The result of stage A4 (transportation of product) in the table of this EPD refers to transportation of 100 km. This product might also be delivered to the countries in the table below. To adapt the impact of transportation in the A4 column, the results expressed in this EPD must be multiplied by a corresponding multiplication factor below.

Location	Average Distance [km]	Multiplication Factor
Europe (EPD reference value)	100	1
Germany	350	3,5
Austria	816	8,2
Belgium	450	4,5
Czech Republic	484	4,8
Denmark	631	6,3
England	1013	10,1
Finland	1973	19,7
France	726	7,3
Hungary	1148	11,5
Ireland	1495	14,9
Italy	1654	16,6
Netherlands	360	3,6
Norway	1039	10,4
Poland	948	9,5
Romania	1484	14,8
Slovakia	854	8,5
Slovenia	1000	10,0
Spain	2031	20,3
Switzerland	688	6,9
Turkey	2803	28,0
